LinkedIn | GitHub | Portfolio

SUMMARY

DevOps engineer with ~2.5 years building and operating the infrastructure behind a live, **AI-powered healthcare platform**. Owns multi-cloud Kubernetes, CI/CD automation, and production incident response, with strong **Linux, Bash, and Python** fundamentals and a focus on **security, scalability, and cost efficiency**.

TECHNICAL SKILLS

Containers & Orchestration: Kubernetes, Docker, Helm, container registries (ECR)

CI/CD & IaC: GitHub Actions, ArgoCD, Terraform, Ansible, Helm, SonarQube, Trivy, Bash

Cloud: AWS (EC2, S3, EKS, ECR, VPC, IAM, ELB, EBS, Amplify, Beanstalk), Azure (AKS, ACR, VNet, Blob Storage, Key Vault), Cloudflare

Networking & Security: IAM, DNS / CoreDNS, VPN, VPC, bastion hosts, Nginx ingress, load balancers, cert-manager / TLS

Observability: Prometheus, Grafana, Loki / ELK, Alertmanager

Languages & OS: Linux, Bash, Python, JavaScript / TypeScript, Node.js

Databases & APIs: MySQL, PostgreSQL, MongoDB — REST APIs, Postman

AI / LLM: OpenAI / GPT integration, containerized model deployment

EXPERIENCE

Medecro Technologies Pvt. Ltd. — Noida (Onsite)

Software Engineer Intern (SDE Intern) → DevOps Engineer — *Jul 2024 – Present*

- Provisioned and operate **Kubernetes clusters across dev, staging, and production — production on AWS, development on Azure (AKS)** — with VPCs, bastion hosts, VPN, Nginx ingress, load balancers, and automated TLS via cert-manager.
- Designed and maintain **CI/CD with GitHub Actions and Helm** — automated Docker builds, image versioning (ECR), and multi-environment rollouts with config via Secrets and ConfigMaps; reusable Helm charts **cut manual deployment effort ~60%** across **100+ backend and 60+ frontend releases**.
- Stood up the **observability stack (Prometheus, Grafana, Loki, Alertmanager)** for cluster metrics, logs, and alerting — catching OOM, latency, and resource issues before downtime.
- Led **production incident response**: resolved OOM evictions, ephemeral-storage pressure, node resource limits, CoreDNS / DNS failures, and ingress latency — cutting MTTR.
- Executed a **multi-cloud migration** that consolidated workloads onto **AWS** with DNS / domain transfers (GoDaddy, Cloudflare), low-downtime cutover, and cost optimization via right-sizing and decommissioning idle infrastructure.
- Containerized and deployed **AI / LLM and radiology services** into the cluster, cutting inference payloads from **10 MB to 100 KB** and exposing **30+ REST APIs** behind the platform.
- Managed **cloud networking and security** (IAM, DNS, VPN, TLS) across environments; authored **Postman collections (200+ endpoints)** and resolved **50+ production issues**.

Legabyte Innovations Pvt. Ltd. — Remote

Backend Developer Intern — *Apr 2024 – Jul 2024*

- Built and deployed backend services for a legal-services platform (**FastAPI**, **MongoDB**) with JWT authentication and REST APIs.

PROJECTS

Talos — Self-Hosted DevOps Control Plane · Live — *Personal Project*

TypeScript, NestJS, Next.js, PostgreSQL/Prisma, Redis/BullMQ, Docker, Ansible, Terraform

- Built a self-hosted control plane replacing manual SSH workflows — one UI for servers, containers, Kubernetes, DNS/TLS, and **four public clouds (AWS, Azure, OCI)**; **~440K LOC**, 176-table PostgreSQL schema.
- Architected a **queue-driven execution model (BullMQ / Redis)** where every infrastructure action — SSH, Ansible, Terraform — runs as a tracked, retryable job with streamed logs, removing direct execution from API endpoints.
- Built visual infrastructure canvases that generate **Terraform HCL** and Docker Compose, with plan/apply diffing, **drift detection**, and pre-apply cost estimation.
- Built the delivery pipeline with **ArgoCD** (GitOps CD), **SonarQube** quality gates, and **Trivy** image / vulnerability scanning.
- Shipped an **AI DevOps engine** — multi-provider LLM + pgvector RAG over infrastructure telemetry with **proposal-gated remediation** (model proposes, human approves, queue executes).

EDUCATION

Madhav Institute of Technology, Gwalior — Sep 2021 – Jul 2025

B.Tech, Computer Engineering — GPA: 8.01 / 10
